

Graco Launches Highest-Powered Electrostatic Airless Disinfectant Sprayer

January 21, 2021

The fastest, most powerful electrostatic system designed to provide superior coverage

MINNEAPOLIS--(BUSINESS WIRE)--Jan. 21, 2021-- Graco Inc. (NYSE:GGG), a leading manufacturer of fluid handling equipment, is proud to introduce the new SaniSpray HP™ 20 Cordless Electrostatic Airless ProPack System that includes the most powerful airless and electrostatic spraying capabilities for the ultimate flexibility and portability to quickly handle every disinfecting job.

Graco has responded to increased disinfecting protocols by incorporating its industry-leading airless and electrostatic technologies into a revolutionary new solution that provides front line workers with a faster way to disinfect spaces and complex surfaces.

"Businesses are challenged to meet stricter, more frequent cleaning protocols using their existing labor force and budgets. The SaniSpray HP 20 electrostatic sprayer is a game changer because it is the fastest tool to apply chemicals with superior wrapping power for complete coverage," said Dan Johnson, Global Total Markets Manager at Graco.

The SaniSpray HP 20 Cordless Electrostatic Airless ProPack is the only portable disinfecting system with three powerful technologies in one system. First, it uses the industry's highest-powered airless spray, delivering up to 1000 psi of spraying power for ten times more productivity versus competitive systems to provide consistent coverage from edge to edge on a wide variety of surfaces.

Second, the system also includes the industry's highest-powered electrostatic technology, driven by its patent-pending pump design and multiple grounding options which work together to deliver superior wrapping coverage on jobs involving more complex surfaces.

Finally, the added ProPack backpack holds over nine times the capacity of fluid for a comfortable, ergonomic and portable high-production system able to spray longer and finish large disinfecting jobs faster. This unique system also provides additional material application flexibility by allowing operators to quickly switch between the large ProPack backpack and the smaller FlexLiner Cup.

All SaniSpray HP sprayers are uniquely built with high-grade materials compatible with List-N disinfectants for use against SARS-CoV-2, the novel coronavirus that causes COVID-19. With variable pressure settings and a variety of spray tips, cleaning professionals can achieve ideal particle atomization and consistent dwell times on every surface to improve their efficiencies on each disinfecting job.
